PRESS RELEASE

Innovative Healthcare RTLS Provider Sonitor Technologies Signs New OEM Agreement with McRoberts Security Technologies

Leading full-service provider of enterprise-wide infant security and Patient Protection solutions the first major solution provider to build system on revolutionary New Sonitor Sense^{TM} RTLS Platform, validating its robustness

New Orleans, March 4, 2013: Sonitor Technologies, the innovative RTLS company in healthcare, today announced it has signed a new OEM agreement to provide their cutting edge RTLS technology to McRoberts Security Technologies, a leading full-service provider of enterprise-wide infant security solutions. The agreement continues to build rapid market recognition for the company's newly released and revolutionary Sonitor Sense^{TM} RTLS Platform.

"With this agreement a key, leading industry player will build their solution on the advanced Sonitor Sense^{TM} platform," said Sonitor President Arvid Gomez. "This arrangement simply could not have been made with any other vendor as the McRoberts solution requires unparalleled accuracy, reliability and robustness that only Sonitor Sense^{TM} offers," he asserted.

Mike Beckerich, Senior Vice-President of McRoberts Security Technologies added, "Combining our Bridge Middleware® with new Sonitor Sense^{TM} platform will take patient tracking and protection to a new level of location precision with the exceptional room-level accuracy of Sonitor Sense^{TM} which is far superior to tracking systems based on RFID or WiFi alone."

Sonitor Sense^{TM} is a unique system which combines Sonitor's renowned High Definition Ultrasound^{TM} technology with Wi-Fi, Low Frequency RF, and other sensory technologies, which can register motion, temperature, and humidity among other advanced features. The system also introduces intelligent Sonitor Sense^{TM} tags that adapt to their environment. The result is a revolutionary RTLS system with increased usability, extreme battery life, and decreased Total-Cost-Of-Ownership.

Sonitor Sense^{TM} is an open integration platform introducing features and functions never before seen in an RTLS platform. It addresses needs in home care, clinics, as well as large multi-campus healthcare facilities, and supports more applications than any other RTLS solution including advanced security and safety applications like that of McRoberts Sercurity Technologies. Sonitor Sense^{TM} is the most versatile system available on the market.

MORE

The Sonitor agreement with McRoberts is an indicator of the convergence between the RTLS industry. Safety and security applications are becoming increasingly reliant on highly accurate RTLS system components which enable safety and security applications for peace of mind.

Sonitor Technologies will exhibit in booth 1763 at the HIMSS 2013 Annual Conference & Exhibition in New Orleans from March 3-7. McRoberts Security Technologies will also be present in the Sonitor booth.

About Sonitor Technologies

Established in 1997 in response to the healthcare industry's need to improve operations visibility. Sonitor Technologies' tired resolution Real Time Locating Systems (RTLS) with patented High Definition capabilities are specifically developed and designed for indoor positioning in complex environments. Sonitor is selected by world-class partners to build industry-leading solutions for global deployment. To learn more visit www.sonitor.com
